2010–2016

SKILLS

Web and App Design
HTML, CSS, JavaScript, Figma, React

Graphic Design & Publications
Adobe Photoshop, Illustrator, InDesign Affinity

ROSS PATTERSON

UNIVERSITY OF CANTERBURY UNDERGRADUATE

ABOUT ME

I am currently an undergraduate student at the University of Canterbury in my third and final year studying Digital Product Design. I am immersed in UI and UX challenges primarily in the context of web design and development.

I am seeking a role that involves designing apps and websites applying and building upon the skills and experience I have developed at University.

MY EXPERIENCE

University of Canterbury

Whilst studying Digital Product Design at the University of Canterbury I have collaborated on projects both in teams and individually. These project have centred around applying human-centred methods to app and web prototypes in Figma or using web technologies such as React and NodeJS.

My projects are typically developed in different phases, such as researching, sketching, prototyping, testing and building. Core Digital Product courses have been supported with a section of computer science and software engineering courses, giving a taste of languages including Python, Java, php, TypeScript and using development tools such as Gitlab and npm.

Before and Outside University

Prior to starting my bachelor I initially became interested in web development through the wiki-hosting site Fandom, volunteering as an active administrator on two different wiki sites.

I also enjoy graphic design and making publications-starting with a Leaver's Yearbook back in high school and later moving to a children's book written by a late relative.
